## ULTRAFORMER III

### HIFU TREATMENT

#### The science behind ULTRAFORMER III

HIFU-powered transducers deliver concentrated waves of ultrasound into multiple layers of skin and body tissues without making direct contact with surrounding areas. Transferring stabilized temperatures of 65-75°C into the targeted zones, the ULTRAFORMER III aims to induce a process of neocollagenesis in the face while tightening body tissues for contouring purposes.

- SAFE
- EFFECTIVE
- MULTI-DEPTH

Comparable to utilizing sunlight and reflecting it through a magnifying glass to deliver a beam, the ULTRAFORMER III treatment delivers ultrasound energy into the target region of the skin, stimulating and formulating collagen regeneration.

- The precision in delivery of a high density of power, triggers neo-collagenesis naturally within the body.
- The dermis layer of the skin naturally synthesizes less collagen over the course of time.
- Focused ultrasound waves deliver energy directly within the skin layer causing a shrinking effect.
- After inflammation and fibroplasia is caused, new collagen is formed in the targeted area.
- Through the regeneration of collagen, wrinkles are eliminated in the process of both firming and tightening the skin.

#### Ultraformer III

Non-Invasive Treatment for Facial Contouring, Tightening & Firming

300 shots

**THB 7,990/Treatment**

Full face 450 shots

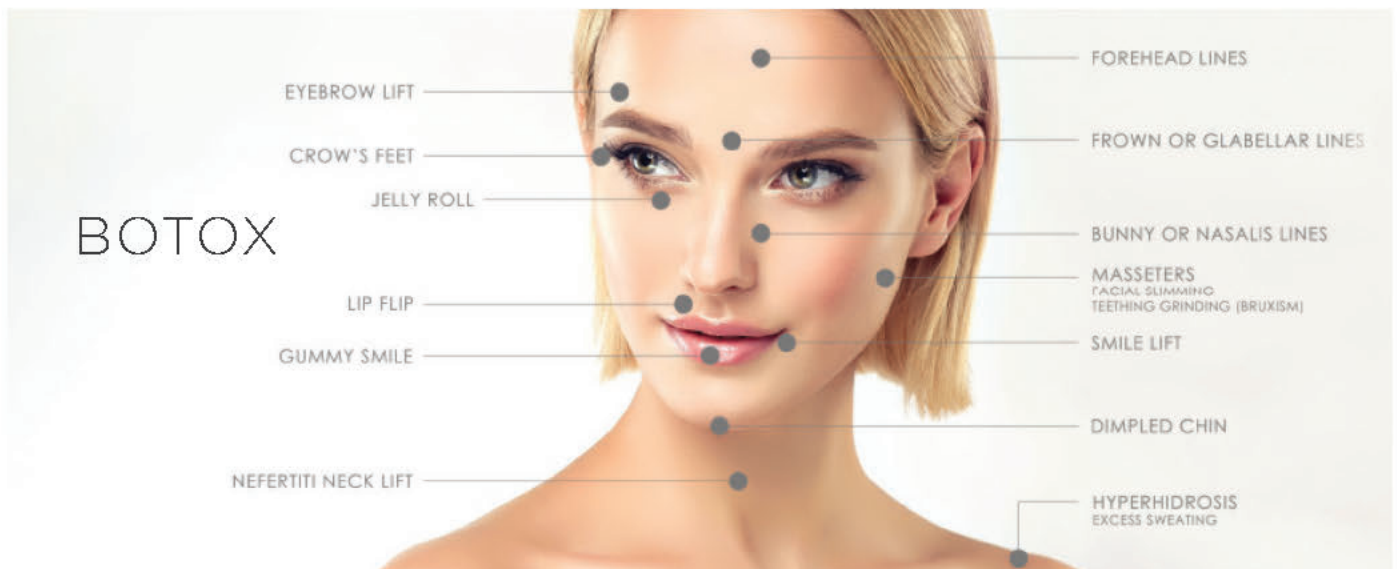

**THB 11,900/Treatment**

Unlimited shots

**THB 15,900/Treatment**

#### Terms & conditions

- Bookings require advance confirmation.
- These are NET Price without commission to agent.

Botox is short for Botulinum Toxin. It's a neurotoxin produced by the Clostridium Botulin bacteria; an organism found in the natural environment.

Botox shots block certain chemical signals from nerves that cause muscles to contract. The most common use of these injections is to relax the facial muscles.

### What are Botox injections used for?

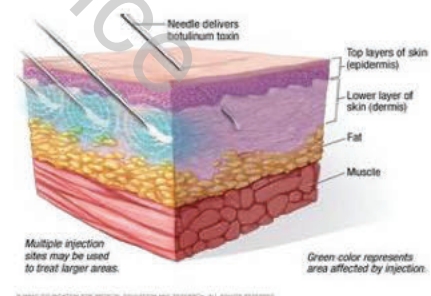

1. Cosmetic—to reduce the appearance of wrinkles and/or to contour areas of the face

The effects are temporary, lasting 4-12 months, depending on the type of botulinum.

2. Medical—to treat a range of conditions including migraines, excessive sweating and an overactive bladder.

Botox injections also are used to ease symptoms of some health conditions. Examples of medical conditions that might be treated with Botox injections include:

- Neck spasms
- Other muscle spasms.
- Lazy eye.
- Sweating.
- Migraine.

Filler is a Hyaluronic Acid (HA) substance which has high chemical stability and liquid absorbent property. This substance is naturally present in human body, and will eventually be physiologically absorbed and degraded without leaving any chemical residue. Thus, it is safe to inject this chemical substance into your body since the chance that it would cause any harm or allergic reaction is very low. However, the injection must be done only by experienced and professional board-certified doctors to avoid any risk of injecting into the blood vessels.

HA filler is an innocuous substance which will leave no chemical residue after it completely dissolved. It will make you look younger, wrinkles appear smoother, with no severe allergic reaction and no downtime.

## FACIAL REJUVENATION

### What is facial rejuvenation mesotherapy?

Mesotherapy is a treatment stimulating natural regenerative processes. It is a method of treating various skin disorders by inserting small doses of medicinal substances directly into the target area.

We can insert active substances into the skin, stimulating the skin to remodel and create networks of new collagen fibers. The micro-injuries intentionally caused during the treatment initiate natural mechanisms of skin regeneration and renewal and speed up its cell divisions.

The preparations delivered into the skin are a cocktail of vitamins, amino acids, micro nutrients, and collagen extract. Mesotherapy fills the space between collagen fibers and imbibes water, making the skin optimally moisturized. Thanks to improved vascularisation, the skin is better oxygenated, fairer, healthier.

### What effects can be expected after the mesotherapy treatment?

Patients have reported the following benefits:

- Improvement of skin quality; "radiant, glowing" skin
- Decreased pore size (lasts up to three months)
- Diminished wrinkles, fine lines
- Improves hydration
- Improves hyperpigmentation
- Improves acne scarring, other scars
- Improved skin cell metabolism
- Stimulation of fibroblasts to produce collagen and elastin
- Improved micro-circulation
- Proper skin nutrition
- Improved facial contour

The end results are usually seen a week post-treatment.

## THREAD LIFT

### What is a thread lift?

Thread lift is a cosmetic procedure that offers a minimally invasive alternative to facelift surgery.

Thread lifts claim to tighten your skin by inserting medical-grade thread material into your face and then “pulling” your skin up by tightening the thread.

Also called a barbed suture lift, it aims to lift and sculpt the shape of your face or breasts. Thread lifts use temporary, medical-grade suture material to “stitch-up” your skin so that it’s drawn taut.

### How does it works :

- Instant skin lifting
- Stimulation of collagen, which influences the renewal of cells and improves the elasticity, skin texture, and fine lines
- Contracts the tissue and helps with skin tightening

### Targeted areas for a thread lift

Many people choose a thread lift for facial areas that “sag” or look less tight over time. These areas include:

- Jowls and Jawline
- Brow line
- Under-eye area
- Forehead
- Cheeks
